Erin Gast

Hi, my name is Erin and I am writing to urge the town board to uphold their plans of a moratorium on large scale developments. I specifically oppose the approval of the AI data center proposed by TeraWulf without up to date zoning and access to full site plans. AI Data Centers are terrible for the environment around them, and are very costly to run.

Subject: Re: Strong organizational objection to proposed data center conversion at Cayuga Power Plant — PFAS risks, community silencing, and cumulative environmental and economic harm

This comment is submitted in relation to the Town of Lansing's newly revised moratorium proposal scheduled for vote on November 19. Zero Waste Ithaca reiterates its strong opposition to the proposed data-center conversion at the Cayuga Power Plant site and urges the Board to adopt a moratorium broad enough to halt large-scale development while the zoning rewrite is still in progress. Expanded exemptions in the current draft risk undermining the moratorium's intent and could allow significant industrial projects to advance before proper environmental and community review is completed.

Please confirm receipt so we can ensure that our comment is included in the official public record for the November 19 meeting.

Subject: Public comment in support of moratorium

I grew up in Lansing and now live in Ithaca. I am writing in support of a moratorium on commercial developments while the town works on updating the zoning stuff.

I am specifically concerned about the AI data center and how it will impact my old neighbors and the natural environment that made growing up in Lansing so special. The issues described at the town hall meeting last week about the Dollar General and others solidified my support of a moratorium while the code is updated.
